Webplots/qctables now up

Isabel, Jacquie, and I have all worked to get the R/json-based webplots and qctables working. I just added the usual link to these in the top wiki page. Note the different qctables colors, which are hopefully easier to read!

Some things that still need work:

- labels for the 2D plot panels
- winds in geo coordinates
- reordering of plots and qctable data to get the station sequence 1-18 DONE (plots and qctable)
- placeholders for totally missing data in qctables DONE
- add Spd, Rfan to qctables DONE
