

All ISG managed devices have the printers and drivers installed. To print, simply select a printer in the print dialog box of the application you're working in.

For visitors, you will need to connect to our VPN ([GlobalProtect VPN](#)), choose a printer from the list in the locations page below, then follow the installation instructions for your devices operating system.

You may print to any printer regardless of your office location.

CGD does not implement printing quotas, however, paper is not cheap, so please think before you print to cut down on waste.
