

ISS teardown 16 May 2022

A warm sunny day with occasional breezy periods. The SWEX campaign is over and teardown has begun, starting at the ISS1 site. We'll be working here for 2 or 3 days, then moving on to ISS3 at Sedgwick and finishing at ISS2 at Rancho Alegre.

At ISS1, the DM computer's main ds data directory has been backed up to two USB drives, one of which also holds the Modular Profiler raw data set copied from the profiler computer. The DSM thumb drive is now in Jacquie's procession. The profiler clutter fence has been removed and is ready for pickup tomorrow and the wind lidar is ready for a crane lift (also tomorrow).

Cole and David working on the Modular Wind Profiler and Liz and Tony taking down the met tower at ISS1.
