

Teardown 9/29

Packin' it up...

Huge day. ISS helped us pickup all the solar panels with their empty Uhaul. David, Bill, Justin and myself disassembled the TT and towed it to a safe pickup location near the airport FBO. Mark Peterson approved of the temp location for the TT. Clayton helped us with running equipment back to base and packing the container. Sam disconnected power to the base trailer and I recorded the kWhr usage. Network equipment is now removed from trailer. All of our equipment is now removed from the field. Spoke with trailer transit and container transit and we are on schedule for monday pickups. Justin and I plan to do final wrap up tomorrow.
