

# Site wvally flagging and soil install

At site about 1045-1130. Still raining -- used canopy.

Tower site picked to avoid building for NNW winds. Rad stand put on east side in case of west winds. Should be able to drive quite close on track from parking lot.

Soil installed. Sticky, globular black clay. Quite wet. Lots of dog droppings in this area (including the soil site). Did not check sensor function.
