

Site 4 visit - not reporting

Sat Nov 20

visited site 4 (not reporting as of 7:00 PM last night)

10:30 AM MST cycled power to dsm

station now reporting

PS by Gordon: discovered that this site had a typo in the crontab entry and the net_check.sh and router_check.sh scripts weren't being run. Fixed the typo.

/var/log/isfs/messages* and a listing of data files (lsu) indicate that the DSM was up and taking data, but the router/modem couldn't connect.

If router_check.sh script can't ping google or eol, it power cycles the router&modem which should have fixed the issue.
