

hiland3 krypton, soils

Dec 8, 1:42 pm MST, Tom, Gordon

kh2oV = 0.27 V

Lowered mast at 1:48 pm. Cleaned krypton with water. kh2oV = 1.5 V

Raised mast 1:59.

twH (3/1/11) high-rate kh2oV and w suggest these times for lowering & raising the mast are okay.

(3/2/11): kh20V data shows cleaning occurred at 13:52;

high-rate pressure data clearly shows mast down 13:50 - 15:58;

longer period (13:48 - 13:59) may account for time to begin and complete mast lowering

Soil mote has not been reporting at this site since last night. Tsoil owed spikes last night, then all soil data stopped.

mote_dump showed it was continually resetting. Yellow light on solid.

Disconnected tsoil 018, restarted mote. This site now has no Tsoil.
