

Recycle power at hiland3

Power recycled twice at Hiland3 at 1000 and 1005 MST (1700 and 1705 UTC) while on phone with Tom Horst. Recycles were unsuccessful at allowing Tom to ping the site, which had been power-recycled earlier this morning by John Hortel, also to no avail. The station is, nevertheless, running the fan and collecting data on-site. Tom suggests that there may be an intermittency in the control line at this site, which will be handled by the ISFS crew arriving in Salt Lake City tomorrow.

TWH: the power recycle was successful, since I was later able to ssh in and data is being transmitted.
