

# hiland3 power cycle 31 Dec 2010 3120 MST

1:20pm MST 31 Dec 2010

After battery replacement, hiland3 was not communicating, though it was recording data locally.

(TWH: I don't think Highland's batteries were replaced. John Horel recycled power this morning around 7 am, which perversely stopped the station.)

Horst requested a power cycle of the DSM to restart the cellular modem.

This was performed and at about 1:25 Horst was able to ssh into the station.
