

# Playa1 site visit

14 Jan: Militzer, Oncley

Reason: 3G has been down since yesterday afternoon.

0834: Jiggle router

0835: brush off solar panels

0836: brush off p port and TRH

0838-0840: brush off rads -- not much encrustation, just about a little bit of snow on 30% of uplooking domes/rest clear; cleaned tops with methanol; dessicant on downlookers fine, uplookers about 1/2.

0840-0905: diagnosing station problem--viper was down since 4pm yesterday and lost data. Now is working again.

P.S. from Gordon: "It somehow ate all its memory. I'll watch it and see if I can find the culprit."

0916: klean krypton (with new M1 methanol) 0.6V -> 1.9V
