

Feb 1 Riverton7, shadowband

14:30 - 15:00

Clear and cold with winds

This was an afternoon adjustment of the shadowband. It appears the latest change made with the mounting of the Licor sensor did not help. Tom found he had to make a major elevation change to shadow the sensor. He left the setting at 32 degrees.

Kurt is sending out one of the other shadowband units so we can do some comparisons
