download speeds

Gordon, June 25

I did some by-hand rsyncs of part of today's data from sites 2-4, using the rsync -z (compress) option:

site	speed (byte /sec)	total size (Mbyte)	compressed size (Mbyte)
ncar2	58467	52	21
ncar3	45783	121	38
ncar4	54916	52	21

The downloads were happening simultaneously. These speeds look good, 40-60 kbyte/sec is acceptable.
