

NCAR 1-4 visit

Russ, Jimmy, and Dan visited the CWEX stations on July 29 to install some bug shields on the inlet bells of the 2m TRH sensors.

The shields consist of gray colored fiberglass screen cut in about 18 X 18 in square.

The corners of the square were grabbed together as the middle of the screen was positioned over the inlet and one thick rubber band was adequate to secure the screen corners around the outside wall of the inlets.

Here is a time-line of the visits (all times in CDT).

ncar2 10:40-10:50 (extra time to make the prototype and cut extra screens)

ncar1 11:26-11:28

ncar3 11:43-11:44

ncar4 11:48-11:49
