

# TecPlot

## TecPlot

### lfmhdf.mcr

[lfmhdf.mcr](#) reads in a LFM MHD file and plots pressure and velocity. There are two ways to run this script:

1. Command-line: `tecplot -p lfmhdf.mcr`, which will prompt for the name of an [LFM hdf file](#) via a dialog box.
2. Interactively in the tecplot window by running the script.
